portfolio

EDUCATION

M.Sc.
Data and Knowledge Engineering

Otto-von-Guericke University

Apr 2019 – Mar 2024

Magdeburg, Germany

German GPA: 2.2, CGPA: 8.42

B.E.
Computer Science and Engineering

Vidyavardhaka College of Engineering

Jun 2012 – Jul 2016

Mysuru, India

CGPA: 7.68

SKILLS

Python
R
ASP.NET
React.js
Node.js
Java
C++
SQL
Postgres
mongoDB
SPLUNK
Kafka

LANGUAGES

English: Professional C1

German: Intermediate B1

EXPERIENCE

Big Data Analyst in Project Management Metrics

Bosch Engineering GmbH

Apr 2021 – Dec 2022 | Abstatt, Germany

- Worked on the analysis of data originating from software development life cycle using SPLUNK
- Clean-up and modeling of data origination from various sources including sprint planning and requirement management tools like ALM and DOORS
- Developed dashboards for the visualization and dynamic analysis of the full V-Model pertaining to requirement management
- Rolled out the generic real-time dashboards to various projects using CICD tools including bitbucket and Jenkins

Technologies: SPLUNK, Python, SQL, Jenkins, bitbucket

Software Developer

Metratec Gmbh

Jun 2019 – Feb 2021 | Magdeburg, Germany

- Worked as a full stack web developer and handled API integration with react-redux dashboards
- Worked on real time data using web sockets
- Worked on event sourcing and reSolve(a CQRS framework built using node.js)
- Managed Gitlab pipeline and docker configurations with yaml

Technologies: Reactjs, nodejs, reSolve, web sockets, node-red, kafka

Software Engineer

Happiest Minds Technologies Pvt Ltd

Oct 2016 – Jan 2019 | Bengaluru, India

- Contributed as a full stack web developer and worked on ASP.NET MVC applications and Web API services built on .NET framework 4.6.2 and .NET core
- Worked on react.js and redux to implement stateful front-end UI
- Worked exclusively on Health Care domain with the knowledge of online data exchange standards such as HL7
- Worked on AWS EC2, S3 buckets, Simple Mail Service and Lambda(for deploying micro services)
- As a billable resource, interacted with clients to understand requirements and effectively communicated the innovative ideas to solve their problems

Technologies: ASP.NET MVC/WebAPI, C#, Reactjs, nodejs, AWS, Jenkins

LIBRARIES

PyTorch | Keras | Tensorflow | scikit-learn | scikit-image | NLTK | spaCy | gensim | node-red | reSolve

CICD

Bitbucket | Git Lab | Jenkins | Docker | Singularity

PROJECTS

Master's Thesis: Exploration of Deep Learning based Vessel Segmentation with Less to No Supervision

Code

July 2023 – March 2024

- The study aims at learning good quality vessel segmentation using 3D patch based unsupervised learning by estimating k-class probability distribution using Attention WNet architecture.
- The research explores the possibility of generating quality vessel segmentation in the absence of manual expert annotations.
- The study also extends the 2D MIP based pipeline to incorporate the weakly annotated MIPs of the 3D volume instead of the full-volume annotations.
- The research also explores the use of weak, noisy labels as supervision using the deformation-aware semi-supervised learning pipeline.
- The study compares the segmentation results of unsupervised, weakly-supervised and semi-supervised approaches and provides a novel performance ranking based on vessel diameters.

Technologies Used: Python, PyTorch, nibabel, scikit-image, cuda, WNet, Deep CNN

Enhancing Vessel Continuity in Deep Learning based Segmentation using Maximum Intensity Projection as Loss

Code   Paper

April 2023 – Sep 2024

- Study focuses on challenges pertaining to segmentation of biomedical images by extending *"DS6: Deformation-aware Semi-supervised learning"* published by Dr.Chatterjee et.al., with Maximum Intensity Projection (MIP) comparisons
- Proposed Vessel Segmentation approach was validated using limited annotated samples of high resolution 7Tesla 3D-MRA volumes
- Qualitative analysis of ROI's revealed clear improvement in the continuity of vessel structures perceived by the Deep Learning network after incorporating MIP comparisons as one of the loss terms during training

Technologies Used: Python, PyTorch, nibabel, scikit-image, cuda, docker

Deep Learning Pipeline for Analysis of the 3D Morphology of the Cerebral Small Perforating Arteries

Code   Paper

Oct 2022 – Jun 2023

- Research aims at exploring possible benefits of Unsupervised Deep Learning (DL) techniques to reduce the dependency on prior annotations in 3D Image Segmentation
- Research tasks include comparison of quality of segmentations generated using UNet and WNet based architectures with and without limited/weak annotations
- Study extends *Attention WNet* architecture with the similarity and consistency losses proposed in the *Differentiable Feature Clustering (DFC)*
- Approach is validated by performing Pathology Detection(Tumor Segmentation) using 3D MRI volumes obtained using 3Tesla and 7Tesla scanners

Technologies Used: Python, PyTorch, Docker, Singularity, scikit-image, cuda, WNet, Deep CNN
